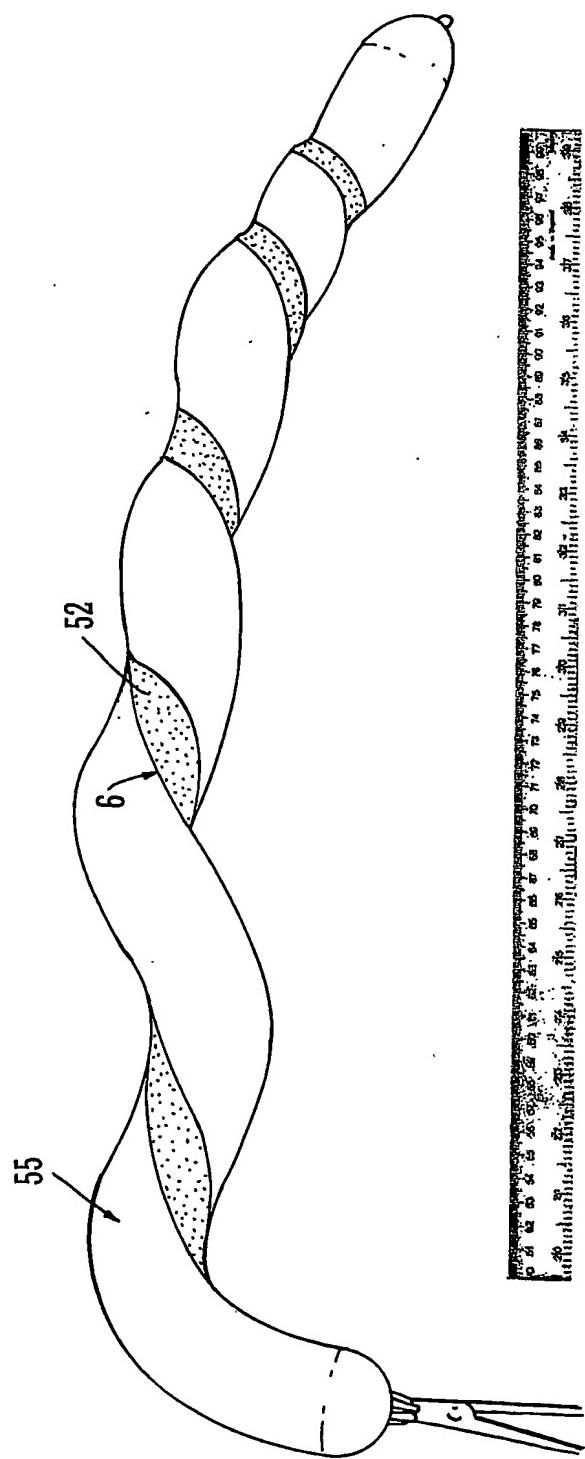

FIG. 9

Figure 9 shows a side view of the probe assembly. The probe body is coiled in a helical shape. The distal end of the probe (the end closest to the viewer) is straight and ends in a three-pronged probe tip. The proximal end (the end furthest from the viewer) is curved and has a circular cross-section. The probe body is made of a flexible material, indicated by the coiled nature of the drawing. The probe tip is shown in a separate, enlarged view at the bottom right of the figure.
